NEW QUESTION: 1

You write a Web application that uses registry entries for its configuration settings.

You need to configure the Web setup project to validate the registry entries before the setup completes.

What should you do?

- A. right-click the root node of the setup project in Solution Explorer. Select the View option. Select the Registry option. Type the registry entries in the editor.
- B. open the File Types Editor. Select the Add File Type option. Select the Add Action option and name it as RegistryAction. Configure RegistryAction by using the registry entries.
- C. open the Registry Editor. Type the registry entries in the editor.
- D. open the Launch Conditions Editor. Select the Add Registry Launch Condition option. Configure the registry properties by using the registry entries.

Answer: D

NEW QUESTION: 2

Answer:

Explanation:

Explanation

This reference architecture shows how to deploy VMs and a virtual network configured for an N-tier application, using SQL Server on Windows for the data tier.

Scenario: You have a public-facing application named App1. App1 is comprised of the following three tiers:

- * A SQL database
- * A web front end
- * A processing middle tier

Each tier is comprised of five virtual machines. Users access the web front end by using HTTPS only.

- * Technical requirements include:
- * Move all the virtual machines for App1 to Azure.
- * Minimize the number of open ports between the App1 tiers.
