NEW QUESTION: 1

A customer is using AWS for Dev and Test.

The customer wants to setup the Dev environment with Cloudformation.

Which of the below mentioned steps are not required while using Cloudformation?

- A. Provide the parameters configured as part of the template
- B. Create a stack
- C. Configure a service
- D. Create and upload the template

Answer: C

Explanation:

AWS Cloudformation is an application management tool which provides application modelling, deployment, configuration, management and related activities. AWS CloudFormation introduces two concepts: the template and the stack. The template is a JSON-format, text-based file that describes all the AWS resources required to deploy and run an application. The stack is a collection of AWS resources which are created and managed as a single unit when AWS CloudFormation instantiates a template. While creating a stack, the user uploads the template and provides the data for the parameters if required.
