Answer: A,D

NEW QUESTION: 2

Which Cisco Nexus switch offers possibilities for implementation of the virtual switching layer in VMware?

- A. Cisco Nexus 5596 Switch
- B. Cisco Nexus 7010 Switch
- C. Cisco Nexus 2248 FEX
- D. Cisco Nexus 1000v Switch

Answer: D

NEW QUESTION: 3

Your organization is developing a web application. The application will access data from a Microsoft SQL Server database.

You must implement a security solution that meets the following requirements:

- * All user logins must be associated with an Active Directory
- * Service accounts are not permitted.
- * Constrained database are not permitted.
- * Users must not be able to log on to SQL Server as the web application and access the database.
- * The web application must be permitted to display records to the and add the database.

You need to implement the required security and permitted structure for the web application while the principle of least privilege.

Which settings should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: Use Windows authentication

Windows authentication is usually the best choice in the following situations:

There is a domain controller.

The application and the database are on the same computer.

You are using an instance of SQL Server Express or LocalDB.

Box 2: Database application role

An application role is a database principal that enables an application to run with its own, user-like permissions. You can use application roles to enable access to specific data to only those users who connect through a particular application.

Box 3: Select/Insert

The web application must be permitted to display records and add records to the database.
