- C. Option B
- D. Option A

**Answer: C**

#### **NEW QUESTION: 2**

What is the primary goal of setting up a honey pot?

- A. To set up a sacrificial lamb on the network
- B. To entrap and track down possible hackers
- C. To know when certain types of attacks are in progress and to learn about attack techniques so the network can be fortified.
- D. To lure hackers into attacking unused systems

**Answer: C**

Explanation:

The primary purpose of a honeypot is to study the attack methods of an attacker for the purposes of understanding their

methods and improving defenses.

"To lure hackers into attacking unused systems" is incorrect. Honeypots can serve as decoys but their primary purpose is to study the behaviors of attackers.

"To entrap and track down possible hackers" is incorrect. There are a host of legal issues around enticement vs entrapment but a good general rule is that entrapment is generally prohibited and evidence gathered in a scenario that could be considered as "entrapping" an attacker would not be admissible in a court of law. "To set up a sacrificial lamb on the network" is incorrect. While a honeypot is a sort of sacrificial lamb and may attract attacks that might have been directed against production systems, its real purpose is to study the methods of attackers with the goals of better understanding and improving network defenses.

Which statement is true about how the router with the IP address 172.16.236.1 will send a data packet to this computer?

- A. The router works at Layer 3 of the OSI model and does not use Layer 2 MAC addresses to send packets to the destination computer.
- B. The router encapsulates the packet in a frame addressed to the MAC address FF-FF-FF-FF-FF-FF and sends it out the interface connected to the 172.16.236.0 network.
- C. The router uses an ARP request to obtain the correct MAC address for the computer. It then encapsulates the packet in a frame addressed to the MAC address 00-0D-60-FD-F0-34.
- D. The router encapsulates the packet in a frame addressed to the MAC address of the next hop router on the path to the computer.

**Answer: C**
