Incorrect Answers:
B. Permissions on the file system define the level of access
logged on users have to files and folders. However, should an
unauthorized user gain access to an authorized user's user
account, they would gain access to the files and folders.
C. Trusted Platform Module (TPM) is a hardware-based encryption
solution that is embedded in the system's motherboard. It helps
with hash key generation and stores cryptographic keys,
passwords, or certificates.
D. Access Control Lists (ACLs) define the level of access
logged on users have to resources. However, should an
unauthorized user gain access to an authorized user's user
account, they would gain access to the data.
