Explanation:
Microsoft Azure Rights Management (previously known as Windows
Azure Active Directory Rights Management). To be able to
decrypt rights protected documents you need to make sure that
Microsoft Azure Rights Management is set up. Also you will need
to enable a SuperUser account because The Active Directory
Rights Management Services (AD RMS) super users group is a
special group that has full control over all rights-protected
content managed by the cluster. Its members are granted full
owner rights in all use licenses that are issued by the AD RMS
cluster on which the super users group is configured.
This means that members of this group can decrypt any
rights-protected content file and remove rights- protection
from it.
The super users group is not enabled and is not assigned a
group by default.
This can be done by running the appropriate commands in
sequence which are:
Import-Module AADRM
Connect-AADRMService
Enable-AADRM
Enable-AADRMSuperUserFeature
