NEW QUESTION: 1
Margaret Walker, who would become one of the most important twentieth century African-American poets,
was born in Birmingham, Alabama, in 1915. Her parents, a minister and a music teacher, encouraged her
to read poetry and philosophy even as a child. Walker completed her high school education at Gilbert
Academy in New Orleans and went on to attend New Orleans University for two years. It was then that the
important Harlem Renaissance poet Langston Hughes recognized her talent and persuaded her to
continue her education in the North. She transferred to Northwestern University in Illinois, where she
received a degree in English in 1935. Her poem, "For My People," which would remain one of her most
important works, was also her first publication, appearing in Poetry magazine in 1937.
The passage suggests that Walker's decision to become a poet
A. was sudden and immediately successful.
B. occurred before she entered college.

C. was not surprising, given her upbringing.
D. occurred after her transfer to Northwestern University.
E. was primarily a result of her interaction with Hughes.
Answer: C
Explanation:
The passage doesn't specifically say that Walker was writing poetry before she entered New Orleans
University. Eliminate (A). Hughes recognized her talent, but he didn't create it, so eliminate (B). Hughes
recognized her talent before she transferred to Northwestern, so eliminate (D). The passage, if anything,
implies that Walker wrote poetry for some time before publishing anything, so eliminate (E). The passage
makes reference to her parents' occupations and encouragement, implying that they had an influence on
her decision to become a poet

NEW QUESTION: 4

A. Option A
B. Option B
C. Option C
D. Option D

Answer: B
Explanation:
* Scenario: A central log of the IP address leases and the users associated to those leases must be created.
* Feature description IPAM in Windows Server 2012 is a new built-in framework for discovering, monitoring, auditing, and managing the IP address space used on a corporate network. IPAM provides for administration and monitoring of servers running Dynamic Host Configuration Protocol (DHCP) and Domain Name Service (DNS). IPAM includes components for:
Automatic IP address infrastructure discover)': IPAM discovers domain controllers, DHCP servers, and DNS servers in the domains you choose. You can enable or disable management of these servers by IPAM.
Custom IP address space display, reporting, and management: The display of IP addresses is highly customizable and detailed tracking and utilization data is available. IPv4 and IPv6 address space is organized into IP address blocks, IP address ranges, and individual IP addresses. IP addresses are assigned built-in or user-defined fields that can be used to further organize IP address space into hierarchical, logical groups.
Audit of server configuration changes and tracking of IP address usage: Operational events are displayed for the IPAM server and managed DHCP servers. IPAM also enables IP address tracking using DHCP lease events and user logon events collected from Network Policy Server (NPS), domain controllers, and DHCP servers. Tracking is available by IP address, client ID, host name, or user name.
Monitoring and management of DHCP and DNS services: IPAM enables automated service availability monitoring for Microsoft DHCP and DNS servers across the forest. DNS zone health is displayed, and detailed DHCP server and scope management is available using the IPAM console.
