NEW QUESTION: 1
Your network contains an Active Directory domain named Contoso.com. Contoso.com
contains an enterprise certification authority (CA) named CA1.
You enable Secure Socket Tunneling Protocol (SSTP) on a server named Server1.
A user named User1 attempts to establish an SSTP connection to Server1 and receives
the following error message: "Error 0x80092013: The revocation function was unable to

check revocation because the revocation server was offline."
You verify that all certificates services are online.
You need to ensure that User1 can connect to Server1 by using
SSTP.
What should you do first?
A. Publish the certificate revocation list distribution point
(CDP) to a location that is accessible from the Internet.
B. Add a certificate to Server1 that contains
Server1.contoso.com as a Subject Alternative Name (SAN).
C. Configure a pre-shared key for IPSec on User1's computer.
D. Configure User1 for certificate auto enrollment.
Answer: A

Client tries to connect to SSTP VPN server and it fails to
connect giving error message 0x80092013
Trouble-shooting steps: This will happen if client is failing
the certificate revocation check of the SSL certificate
obtained from server side.
This can happen because of two reasons: a) Ensure the CRL check
servers on the server side are exposed on the Internet (i.e.
are available on the Internet). This is because CRL check is
done on the client side during SSL connection establishment
phase and the CRL check query will be directly going on the
Internet (and not on top of VPN connection because it is not up
yet). b) CRL URL that is set inside the machine certificate on
RRAS server is pointing to the internal DNS name (e.g.
myvpn.contoso.local) and not the external name (special thanks
to one of our esteemed customers, Bill Voltmer, in pointing
this out). To validate this, open the certificate snap-in on
your RRAS server, go to details tab and look at "CRL
distribution point" field. To fix this:
1.Open Server Manager and navigate to Roles, Active Directory
Certificate Services
2.Right click on CA name (e.g. mycompany-vpn1-CA) and choose
Properties.
3.Click Extensions tab.
4.Select the pre-existing http: URL and click Remove.
5.Click Add...
6.Type http://
7.Type external URL of VPN server
8.Type CertEnroll/
9.Insert variable <CaName>
10.
Insert variable <CRLNameSuffix>
11.
Insert variable <DeltaCRLAllowed>
12.
Type .crl
13.
Check boxes Include in CRLs... and Include in the CDP...

The above should be done before SSTP VPN is configured on RRAS. Or if it is already configured, change the machine certificate by following this blog.
