- D. Display usage reports created by using Microsoft System Center 2012 - Operations Manager.

**Answer: B**

Explanation:

Topic 6, Mix Questions

**NEW QUESTION: 3**

What Netflow component can be applied to an interface to track IPv4 traffic?

- A. flow record
- B. flow monitor
- C. flow sampler
- D. flow exporter

**Answer: B**

Explanation:

Flow monitors are the Flexible NetFlow component that is applied to interfaces to perform network traffic monitoring. Flow monitors consist of a record and a cache. You add the record to the flow monitor after you create the flow monitor. The flow monitor cache is automatically created at the time the flow monitor is applied to the first interface. Flow data is collected from the network traffic during the monitoring process based on the key and nonkey fields in the record, which is configured for the flow monitor and stored in the flow monitor cache. For example, the following example creates a flow monitor named FLOW-MONITOR-1 and enters Flexible NetFlow flow monitor configuration mode:

```
Router(config)# flow monitor FLOW-MONITOR-1 Router(config-flow-monitor)#
```
