- C. Cats will be an enabled physical standby database.
- D. Sheep will be the primary database.
- E. Dogs will be a disabled logical standby database.

Answer: A,C,D

Explanation:

Explanation/Reference:

A switchover is a role reversal between the primary database and one of its standby databases. A switchover guarantees no data loss and is typically done for planned maintenance of the primary system.

During a switchover, the primary database transitions to a standby role, and the standby database transitions to the primary role.
