NEW QUESTION: 2

Your network contains an Active Directory domain named contoso.com.

All client computers run Windows 8.

You deploy a server named Server1 that runs Windows Server 2012 R2.

You install a new client-server application named App1 on Server1 and on the client computers. The client computers must use TCP port 6444 to connect to App1 on Server1. Server1 publishes the information of App1 to an intranet server named Server2 by using TCP port 3080.

You need to ensure that all of the client computers can connect to App1. The solution must ensure that the application can connect to Server2.

Which Windows Firewall rule should you create on Server1?

- A. an inbound rule to allow a connection to TCP port 6444
- B. an inbound rule to allow a connection to TCP port 3080
- C. an outbound rule to allow a connection to TCP port 6444
- D. an outbound rule to allow a connection to TCP port 3080

Answer: A

Explanation:

A. Server2 needs inbound on 3080.

B. All ports outbound allowed by default.

D. Server1 gets request from Client PC's it needs an inbound rule for 6444.

By default, Windows Firewall with Advanced Security blocks all unsolicited inbound network traffic, and allows all outbound network traffic. For unsolicited inbound network traffic to reach your computer, you must create an allow rule to permit that type of network traffic. If a network program cannot get access, verify that in the Windows Firewall with Advanced Security snap-in there is an active allow rule for the current profile. To verify that there is an active allow rule, double-click Monitoring and then click Firewall.

If there is no active allow rule for the program, go to the Inbound Rules node and create a new rule for that program. Create either a program rule, or a service rule, or search for a group that applies to the feature and make sure all the rules in the group are enabled. To permit the traffic, you must create a rule for the program that needs to listen for that traffic.

If you know the TCP or UDP port numbers required by the program, you can additionally restrict the rule to only those ports, reducing the vulnerability of opening up all ports for the program.

NEW QUESTION: 3

You have a server named DHCP1 that runs Windows Server 2012.

DHCP1 does not have access

to the Internet. All roles are removed completely from DHCP1.

You mount a Windows Server 2012 installation image to the C:\Mount folder. You need to install the DHCP Server server role on DHCP1 by using Server Manager. Which folder should you specify as the alternate path for the source files? To answer,

select the appropriate folder in the answer area.

NEW QUESTION: 4

- A. Check the duplex mode for SwitchC's fa0/1 port.
- B. Check the trunk encapsulation mode for SwitchC's fa0/1 port.
- C. Check the trunk encapsulation mode for SwitchA's fa0/2 port.
- D. Check the duplex mode for SwitchA's fa0/2 port.

Answer: D

Explanation:

Here we can see that this port is configured for full duplex, so the next step would be to check the duplex setting of the port on the other switch. A mismatched trunk encapsulation would not result in input errors and CRC errors.
