NEW QUESTION: 2
Which EAP method uses Protected Access Credentials?
A. EAP-PEAP
B. EAP-FAST
C. EAP-GTC
D. EAP-TLS
Answer: B
Explanation:
Explanation/Reference:
Explanation:
EAP-FAST is an EAP method that enables secure communication
between a client and an authentication
server by using Transport Layer Security (TLS) to establish a
mutually authenticated tunnel. Within the
tunnel, data in the form of type, length, and value (TLV)
objects are used to send further authentication-
related data between the client and the authentication server.
EAP-FAST supports the TLS extension as defined in RFC 4507 to
support the fast re-establishment of the
secure tunnel without having to maintain per-session state on
the server. EAP-FAST-based mechanisms
are defined to provision the credentials for the TLS extension.
These credentials are called Protected
Access Credentials (PACs).
