acceptable applications are passed / or granted access.
Incorrect Answers:
A: Removing all local administrator permissions and changing to
cloud aware is not going to keep unrecognized malware
infections at bay.
C: Heuristic based IDS will only look for deviation of normal
behavior of an application or service and thus is useful
against unknown and polymorphic viruses.
D: Modifying the router configuration to pass all the network
traffic via a new proxy server is not the same as protecting
against unrecognized malware infections because the company's
malware detection program in use is still the same.
