NEW QUESTION: 2

Which of the following is a hashing algorithm?

- A. RSA
- B. Diffie-Hellman
- C. Elliptic Curve Cryptography (ECC)
- D. SHA

SHA was designed by NSA and published by NIST to be used with the Digital Signature Standard (DSS). SHA was designed to be used in digital signatures and was developed when a more secure hashing algorithm was required for U.S. government applications. SHA produces a 160-bit hash value, or message digest. This is then inputted into an asymmetric algorithm, which computes the signature for a message. SHA is similar to MD4. It has some extra mathematical functions and produces a 160-bit hash instead of a 128-bit hash like MD5, which makes it more resistant to brute force attacks, including birthday attacks.

Answer: D

NEW QUESTION: 3

Which of the following is a hashing algorithm?

- A. Elliptic Curve Cryptography (ECC)
- B. RSA
- C. Diffie-Hellman (DH)
- D. SHA

Answer: D

Explanation:

SHA was designed by NSA and published by NIST to be used with the

Digital Signature Standard (DSS).

SHA was designed to be used in digital signatures and was developed when a more secure hashing algorithm was required for U.S. government applications.

SHA produces a 160-bit hash value, or message digest.

This is then inputted into an asymmetric algorithm, which computes the signature for a message. SHA is similar to MD4. It has some extra mathematical functions and produces a 160-bit hash instead of a 128-bit hash like MD5, which makes it more resistant to brute force attacks, including birthday attacks.

SHA was improved upon and renamed SHA-1. Recently, newer versions of this algorithm have been developed and released

such as SHA2 which has the following hash length:

SHA-256, SHA-384, and SHA-512.

NOTE: Very recently SHA-3 has also been released but it is too new to be in the CBK.

The following answers are incorrect:

RSA

Diffie-Hellman

Elliptic Curve Cryptography (ECC)

All of the choices above are examples of an Asymmetric algorithm

The following reference(s) were/was used to create this question:

Harris, Shon (2012-10-18). CISSP All-in-One Exam Guide, 6th Edition (p. 827). McGraw-Hill . Kindle Edition.

NEW QUESTION: 4

Users find z/OSMF useful in performing a variety of z/OS system management tasks.

Which statement identifies typical uses for z/OSMF?

- A. CPU Pooling to enable more cost-effective software pricing.
- B. Viewing, defining, and updating policies that affect system behavior and managing z/OS software.
- C. Live relocation of jobs between LPARs while they are actively running.
- D. Management of all attached disk storage including FCP attached disk to minimize frequent monitoring tasks.

Answer: B
