**NEW QUESTION: 2**

**Answer:**

Explanation:

Explanation

Box 1: TRY...CATCH

The TRY...CATCH Transact-SQL construct implements error handling for Transact-SQL that is similar to the exception handling in the Microsoft Visual C# and Microsoft Visual C++ languages. A group of Transact-SQL statements can be enclosed in a TRY block. If an error occurs in the TRY block, control is passed to another group of statements that is enclosed in a CATCH block.

Box 2: RAISERROR(50555, 14, 1 'The update failed.') WITH LOG

We must use RAISERROR to be able to specify the required severity level of 14, and we should also use the LOG option, which Logs the error in the error log and the application log for the instance of the Microsoft SQL Server Database Engine, as this enable a MS MS SQL SERVER alert to be triggered.

Note: RAISERROR generates an error message and initiates error processing for the session. RAISERROR can either reference a user-defined message stored in the sys.messages catalog view or build a message dynamically. The message is returned as a server error message to the calling application or to an associated CATCH block of a TRY...CATCH construct.

**NEW QUESTION: 3**

You are developing a customer information application for a pay television company. The customer's home telephone number is used as the account number for the customer.

Clerks must be able to update the telephone number in case of changes or data entry errors.

A data entry clerk will typically open several forms from the Customers form that are synchronized with the currently

selected customer using a global variable containing the telephone number.

Although you also need to modify the other forms, what two triggers should you code in the

Customers form to keep the forms synchronized in case the data entry clerk updates the telephone number or selects a different customer? (Choose two.)

- A. Pre-Query
- B. When-Validate-Item for the phone number item
- C. When-New-Item-Instance for the phone number item
- D. Key-Next-Record
- E. When-New-Record-Instance
- F. Post-Query

**Answer: B,E**
