This shows what, Through the good reputation of word of mouth, more and more people choose to use MB-330 study torrent to prepare for the MB-330 exam, which makes us very gratified.

NEW QUESTION: 1

You administer a Microsoft SQL Server database named Orders. Users report that during peak usage periods, certain operations are taking more time than expected. Your initial analysis suggests that blocking is the cause.

You need to gather more data to be able to determine which processes are being blocked and to identify the root cause. What should you do?

- A.** Start a Trace using SQL Server Profiler to catch the Lock: Deadlock event.
- B.** Schedule a SQL Agent job to run every 60 seconds and insert the results of executing the sys.dm_os_wait_stats DMV into a table.
- C.** Use sp_configure to set the blocked process threshold. Start a trace using SQL Server Profiler to catch the Blocked Process Report event.
- D.** Use System Monitor to catch the Lock Waits/sec event.

Answer: A

Explanation:

Explanation/Reference:

Explanation:

The Lock:Deadlock event class is produced when an attempt to acquire a lock is canceled because the attempt was part of a deadlock and was chosen as the deadlock victim.

Use the Lock:Deadlock event class to monitor when deadlocks occur and which objects are involved. You can use this information to determine if deadlocks are significantly affecting the performance of your application. You can then examine the application code to determine if you can make changes to minimize deadlocks.

NEW QUESTION: 2

Your network contains an Active Directory forest named contoso.com.

The forest contains the domain controllers configured as shown in the following table.

You plan to deploy an Exchange Server 2013 organization to the forest

A company policy prevents administrators from logging on to DC2 to perform installations.

You need to prepare the Active Directory schema for the planned Exchange Server deployment.

You verify that your user account has all the required permissions to achieve the task. The solution must minimize changes to the Active Directory infrastructure.

- A.** Move the schema master role to DC1, and then run Exchange setup.
- B.** Log on to any server in the West site, and then run Exchange

setup.

C. Log on to DC3 and then run Exchange setup.

D. Deploy a member server to contoso.com, and then move the server to the West site.

Run adprep.exe from the member server.

Answer: A

NEW QUESTION: 3

What is the default file system type for the VNX?

A. XFS

B. UFS

C. VxFS

D. UxFS

Answer: D

NEW QUESTION: 4

Your network consists of one Active Directory domain that contains domain controllers that run Windows Server 2008.

The relative identifier (RID) operations master role for the domain fails and cannot be restored.

You need to restore the RID master role on the network.

What should you do?

A. Force replication between all domain controllers, and then run the Server Manager.

B. From another domain controller, seize the RID operations master role.

C. Run netdom query /d:contoso.com fsmo.

D. Force replication between all domain controllers, and then run the File Server Resource Manager (FSRM).

Answer: B

Explanation:

seize the word seize. If it comes up then it tends to be the answer.

Seize RID master

Forces the domain controller to which you are connected to claim ownership of the relative ID master role without regard to the data associated with the role. Use only for recovery purposes.
