Answer:
Explanation:

NEW QUESTION: 2
Refer to the exhibit.

Router edge-1 is unable to establish OSPF neighbor adjacency
with router ISP-1. Which two configuration changes can you make
on edge-1 to allow the two routers to establish adjacency?
(Choose two.)
A. Reduce the MTU on edge-1 to 1514.
B. Reduce the MTU on edge-1 to 1500.
C. Set the subnet mask on edge-1 to 255 255.255.252.
D. Configure the ip ospf mtu-ignore command on the edge-1 Gi0/0
interface.
E. Set the OSPF cost on edge-1 to 1522.
Answer: B,D
Explanation:
A situation can occur where the interface MTU is at a high
value, for example
9 000, while the real value of the size of packets that can be
forwarded over this interface is
1 500.
If there is a mismatch on MTU on both sides of the link where
OSPF runs, then the OSPF adjacency will not form because the
MTU value is carried in the Database Description
(DBD) packets and checked on the other side.

NEW QUESTION: 3
Which two are prerequisites for configuring Transaction Guard
in a Data Guard environment?
A. Grant execute permission on the DBMS_APP _CONT package to
relevant database schema owners
B. Ensure that connection descriptors for database clients use
the failover clause with the
COMMIT_OUTCOME parameter set to TRUE
C. Create a database service with COMMIT_OUTCOME set to TRUE,
and ensure clients use that service
to connect to the database instance.
D. Create a database service with COMMIT_OUTCOME set to TRUE
and ensure that the service is
statically registered with the default listener on the primary

host
E. Set INSTANCE_NAME identically on all the Data Guard
Configuration databases and modify the local
service name on the client to include a CONNECTION_LIST
containing all the standby hosts.
Answer: A,C
