D. A Network-ISA describes the link state information of a broadcast network or an NBMA network segment.

**Answer: B**

**NEW QUESTION: 3**

Which two areas should you investigate when experiencing problems with the UCS Manager KVM? (Choose two.)

A. Java complications

B. Fabric Interconnects hardware

C. SSD complications

D. server CPU type

E. network complications

**Answer: A,E**

**NEW QUESTION: 4**

Object Security controls access to Subject Areas, Tables, and Columns in OBIEE and can be implemented by using which method?

A. Business Logic Object Security

B. External Table Authentication

C. Single Sign-On (SSO)

D. Database Authentication

E. LDAP Authentication

**Answer: A**

Explanation:

Explanation

Object-level security controls the visibility to business logical objects based on a user's role. You can set up object-level security for metadata repository objects, such as subject areas and presentation folders, and for Web objects, such as dashboards and dashboard pages, which are defined in the Presentation Catalog.

1) Business logic object

This controls access to objects, such as:

\* subject areas

\* presentation tables

\* presentation columns

For example, users in a particular department can view only the

subject areas that belong to their department.

## 2) Web object security

This provides security for objects stored in the Web Catalog, such as dashboards, dashboard pages, folders, and reports. You can view only the objects for which you are authorized. For example, a mid-level manager may not be granted access to a dashboard containing summary information for an entire department.
