I am not sure if my payment was successful or not, Do you provide free support?

**NEW QUESTION: 1**

Synchronization between LDP and IGP suppresses reachable IGP route advertisement to implement network convergence and ensure LDP and IGP are along the same path. This minimizes traffic loss and improves network reliability.

- A. TRUE
- B. FALSE

**Answer: A**

**NEW QUESTION: 2**

Which three are among the various tasks performed by the data Guard Monitor (DMON) process?

- A. communicating with the DMON process of the observer to monitor a primary database in case a fast start failover is required.
- B. maintaining information about all members of the broker configuration in binary configuration files

C. performing role transitions when switchover requests are made

D. communicating with DMON processes in other database instances that are part of the broker configuration

E. activating role-based services appropriately in the various database instances of the configuration, based on the database role

**Answer: B,C,D**

Explanation:

Explanation/Reference:

A: Oracle Enterprise Manager Cloud Control (Cloud Control) works with the Oracle Data Guard monitor to automate and simplify the management of an Oracle Data Guard configuration. With Cloud Control, the complex operations of creating and managing standby databases are simplified through Oracle Data Guard management pages and wizards, including:

\* A switchover operation that helps you switch roles between the primary database and a standby database.

B (not D): The Oracle Data Guard monitor process (DMON) is an Oracle background process that runs on every database instance that is managed by the broker.

E: The broker's DMON process persistently maintains information about all members of the broker configuration in a binary configuration file.
