NEW QUESTION: 1
A company deploys an Office 365 tenant.
You must provide an administrator with the ability to manage company information in Office
365.
You need to assign permissions to the administrator by following the principle of least privilege.
Which role should you assign?
A. Billing administrator
B. Service administrator

C. Global administrator
D. User management administrator
Answer: C
Explanation:
Global admin: Has access to all administrative features. Global admins are the only admins who can assign other admin roles. You can have more than one global admin in your organization. The person who signs up to purchase Office 365 becomes a global admin. Only the global administrator role will allow you to manage company information by means of editing the organization profile. None of the other roles are enabled to manage organization information.

Refer to the exhibit.

Which statement about the ESXi installation on a Cisco UCS C-Series server is true?
A. During the ESXi installation process, you must select the location of the ESXi image file.
B. During the ESXi installation process, on a local RAID you must select the local RAID group
C. The ESXi is installed on a local RAID array and the local RAID group is selected as the first boot option
D. The ESXi is installed on a local drive and the SATA drive is selected as the first boot option
Answer: C

NEW QUESTION: 3

A. Option C
B. Option A
C. Option B
D. Option D
Answer: A

NEW QUESTION: 4
After UDLD is implemented, a Network Administrator noticed that one port stops receiving UDLD packets.
This port continues to reestablish until after eight failed retries. The port then transitions into the errdisable state.
Which option describes what causes the port to go into the

errdisable state?
A. UDLD timers are inconsistent.
B. UDLD is enabled globally.
C. UDLD port is configured in aggressive mode.
D. Normal UDLD operations that prevent traffic loops.
Answer: C
Explanation:
Explanation/Reference:
Explanation:
With UDLD aggressive mode enabled, when a port on a
bidirectional link that has a UDLD neighbor
relationship established stops receiving UDLD packets, UDLD
tries to reestablish the connection with the
neighbor. After eight failed retries, the port is disabled.
