You can certainly let go of your concerns Server-Certified-Associate exam simulation materials about your personal privacy and payment safety, as up till now, we've never let out one word to outside world about our customers, because we have strict rules of our information security Tableau Server-Certified-Associate practice test materials.

During the prolonged review, many exam candidates feel wondering attention is hard to focus, Server-Certified-Associate exam dumps are written to the highest standards of technical accuracy which can make you succeeded in the Tableau Server Certified Associate Exam Server-Certified-Associate exam.

The Server-Certified-Associate latest training pdf will help you learn professional skills to enhance your personal ability, Our Server-Certified-Associate test braindumps are compiled strictly and carefully.

There is a solid reason behind that, Get to the point, why is our Server-Certified-Associate (Tableau Server Certified Associate Exam) exam dumps necessary for your real test, At this moment, our company has been regarded as the best retailer of the Server-Certified-Associate study materials.

**NEW QUESTION: 1**

Which of the following is not one of the rules stipulated by the Securities Exchange Act of 1934?

- A. All securities' exchanges and SROs are required to register with the SEC.
- B. Investment companies are prohibited from using any sales literature that contains an omission of a material fact.
- C. All brokers and dealers are required to be members of a national securities association.
- D. Firms are required to send copies of their annual reports to investors before an annual meeting at which directors are to be elected.

**Answer: B**

Explanation:

Explanation/Reference:

Explanation: The rule prohibiting investment companies from using any sales literature that contains an omission of a material fact is not one of the rules stipulated by the Securities Exchange Act of 1934. This involves the market for new securities and, as such, is a rule stipulated by the Securities Act of 1933. The 1934 Act deals with the secondary market.

**NEW QUESTION: 2**

Your network consists of one Active Directory domain. The domain contains four servers that run Windows Server 2008. The relevant servers are configured as shown in the following table. (Click the Exhibit)

Your company has a department named Sales. All client computers in the Sales department run Windows Vista and use an application named Application1. Application1 uses a dynamic-link library (DLL) named Salesapp.dll.

You plan to deploy a new application named Application2 that uses a different version of Salesapp.dll. During testing, administrators report that Application2 causes Application1 to fail when both applications run on the same computer.

You need to ensure that users can run both applications successfully on the same computer. The solution must enable users that use portable computers to run both applications when they are disconnected from the network.

What should you do?

- A.** On Server2, install Application2. Configure all computers in the Sales department to run Application2 by using Terminal Services RemoteApp (TS RemoteApps).
- B.** On Server1, create and link a Group Policy object (GPO) that assigns Application2 to all computers in the Sales department.
- C.** On Server2, install Application2. Configure all computers in the Sales department to access Application2 by using Terminal Services Gateway (TS Gateway).
- D.** On Server3, create a SoftGrid application package that contains Application2 and stream it to all computers in the Sales department.

**Answer: D**

Explanation:

Explanation/Reference: To ensure that both the applications should be able run on the same computer and must enable users that use portable computers to run both applications when they are disconnected from the network, you need to create a SoftGrid application package that contains App2 on Server3 and stream it to all computers in the Marketing department. SoftGrid applications are sandboxed from each other, so that different versions of the same application can be run under

SoftGrid concurrently. There can be numerous scripts per profile and scripts can even be stuff that is not directly executable such as data or DLLs.

SoftGrid can be executed on a connected desktop system and published via Citrix. The Scripts used on this server can run BEFORE application execution or AFTER the application terminates and can run inside or outside of isolation.

Reference: Application Streaming and SoftGrid - dual mode

### **NEW QUESTION: 3**

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has a virtual switch named Switch1.

Server1 hosts the virtual machines configured as shown in the following table.

Windows Firewall on VM1 and VM2 is configured to allow ICMP traffic. VM1 and VM2 connect to Switch1.

You fail to ping VM1 from VM2.

You need to view the VirtualSubnetId to which VM1 connects.

Which cmdlet should you run on Server1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

### **Answer:**
