Answer: C

NEW QUESTION: 3

The Chief Security Officer (CSO) has requested a vulnerability report of systems on the domain, identifying those running outdated OSs. The automated scan reports are not displaying OS version details, so the CSO cannot determine risk exposure levels from vulnerable systems. Which of the following should the cybersecurity analyst do to enumerate OS information as part of the vulnerability scanning process in the MOST efficient manner?

- A. Execute the nmap -pcommand
- B. Execute the vercommand
- C. Use credentialed configuration
- D. Use Wireshark to export a list

Answer: B

NEW QUESTION: 4

Section B (2 Mark)
Risk to bondholders comes from

- A. I and III
- B. I and II
- C. II and III
- D. All of the above

Answer: D
