D. ì •ë³´ ë³´í˜¸ë¥¼ ë<´ë<1í•˜ëŠ" ë¶€ì„œ ì±…ìž„ìž•

Answer: C

NEW QUESTION: 4

A Solutions Architect is creating an application running in an Amazon VPC that needs to access AWS Systems Manager Parameter Store. Network security rules prohibit any route table entry with a 0.0.0.0/0 destination.

What infrastructure addition will allow access to the AWS service while meeting the requirements?

A. NAT instance

B. VPC peering

C. AWS PrivateLink

D. NAT gateway

Answer: C

Explanation:

You can privately access AWS Systems Manager APIs from your VPC (created using Amazon Virtual Private Cloud) by creating VPC Endpoints. With VPC Endpoints, the routing between the VPC and AWS Systems Manager is handled by the AWS network without the need for an internet gateway, NAT gateway, or VPN connection. The latest generation of VPC Endpoints used by AWS Systems Manager are powered by AWS PrivateLink, a technology that enables private connectivity between AWS services using Elastic

Network Interfaces (ENIs) with private IP addresses in your VPCs. To learn more about PrivateLink, visit the PrivateLink documentation.
https://docs.aws.amazon.com/vpc/latest/userguide/vpce-interface.html
